Welcome to Learn CSS-in-JS

A brief overview of what you will learn in this course.

What will you learn?

In this course, you will learn CSS-in-JS is and how JavaScript can be used to style React applications.

After this course, you will be able to:

- identify what CSS-in-JS is, in contrast with CSS in a stylesheet, and when to use it.
- incorporate the Emotion library into a React app.
- create components that are styled in JavaScript with Emotion.

Learning is social. Whatever you're working on, be sure to connect with the Codecademy community in the forums. Remember to check in with the community regularly, including for things like asking for code reviews on your project work and providing code reviews to others in the projects category, which can help to reinforce what you've learned.
What should you know before starting this course?

This course assumes that you have foundational knowledge in web development—HTML, CSS, and JavaScript. Additionally, you should be familiar with React.

We will also be using the command line throughout the course. If you'd like to review the command line, check out the Learn the Command Line course.

What will you create?

In this course, you will implement CSS-in-JS using the Emotion library in a React app. You will follow a tutorial to style a travel app using the CSS-in-JS syntax.
Hotel Leisure

Enjoy world-class shopping in the heart of the city.
